End Part One...

Project Element Hybrid: Subject Y.

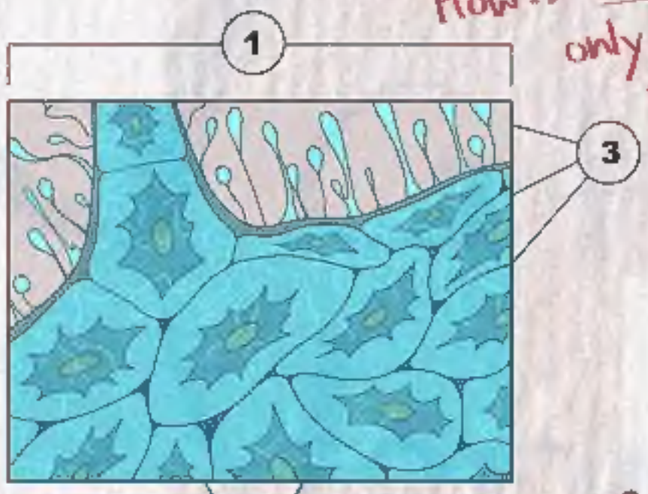
Type Bug/Flying. Sex female.

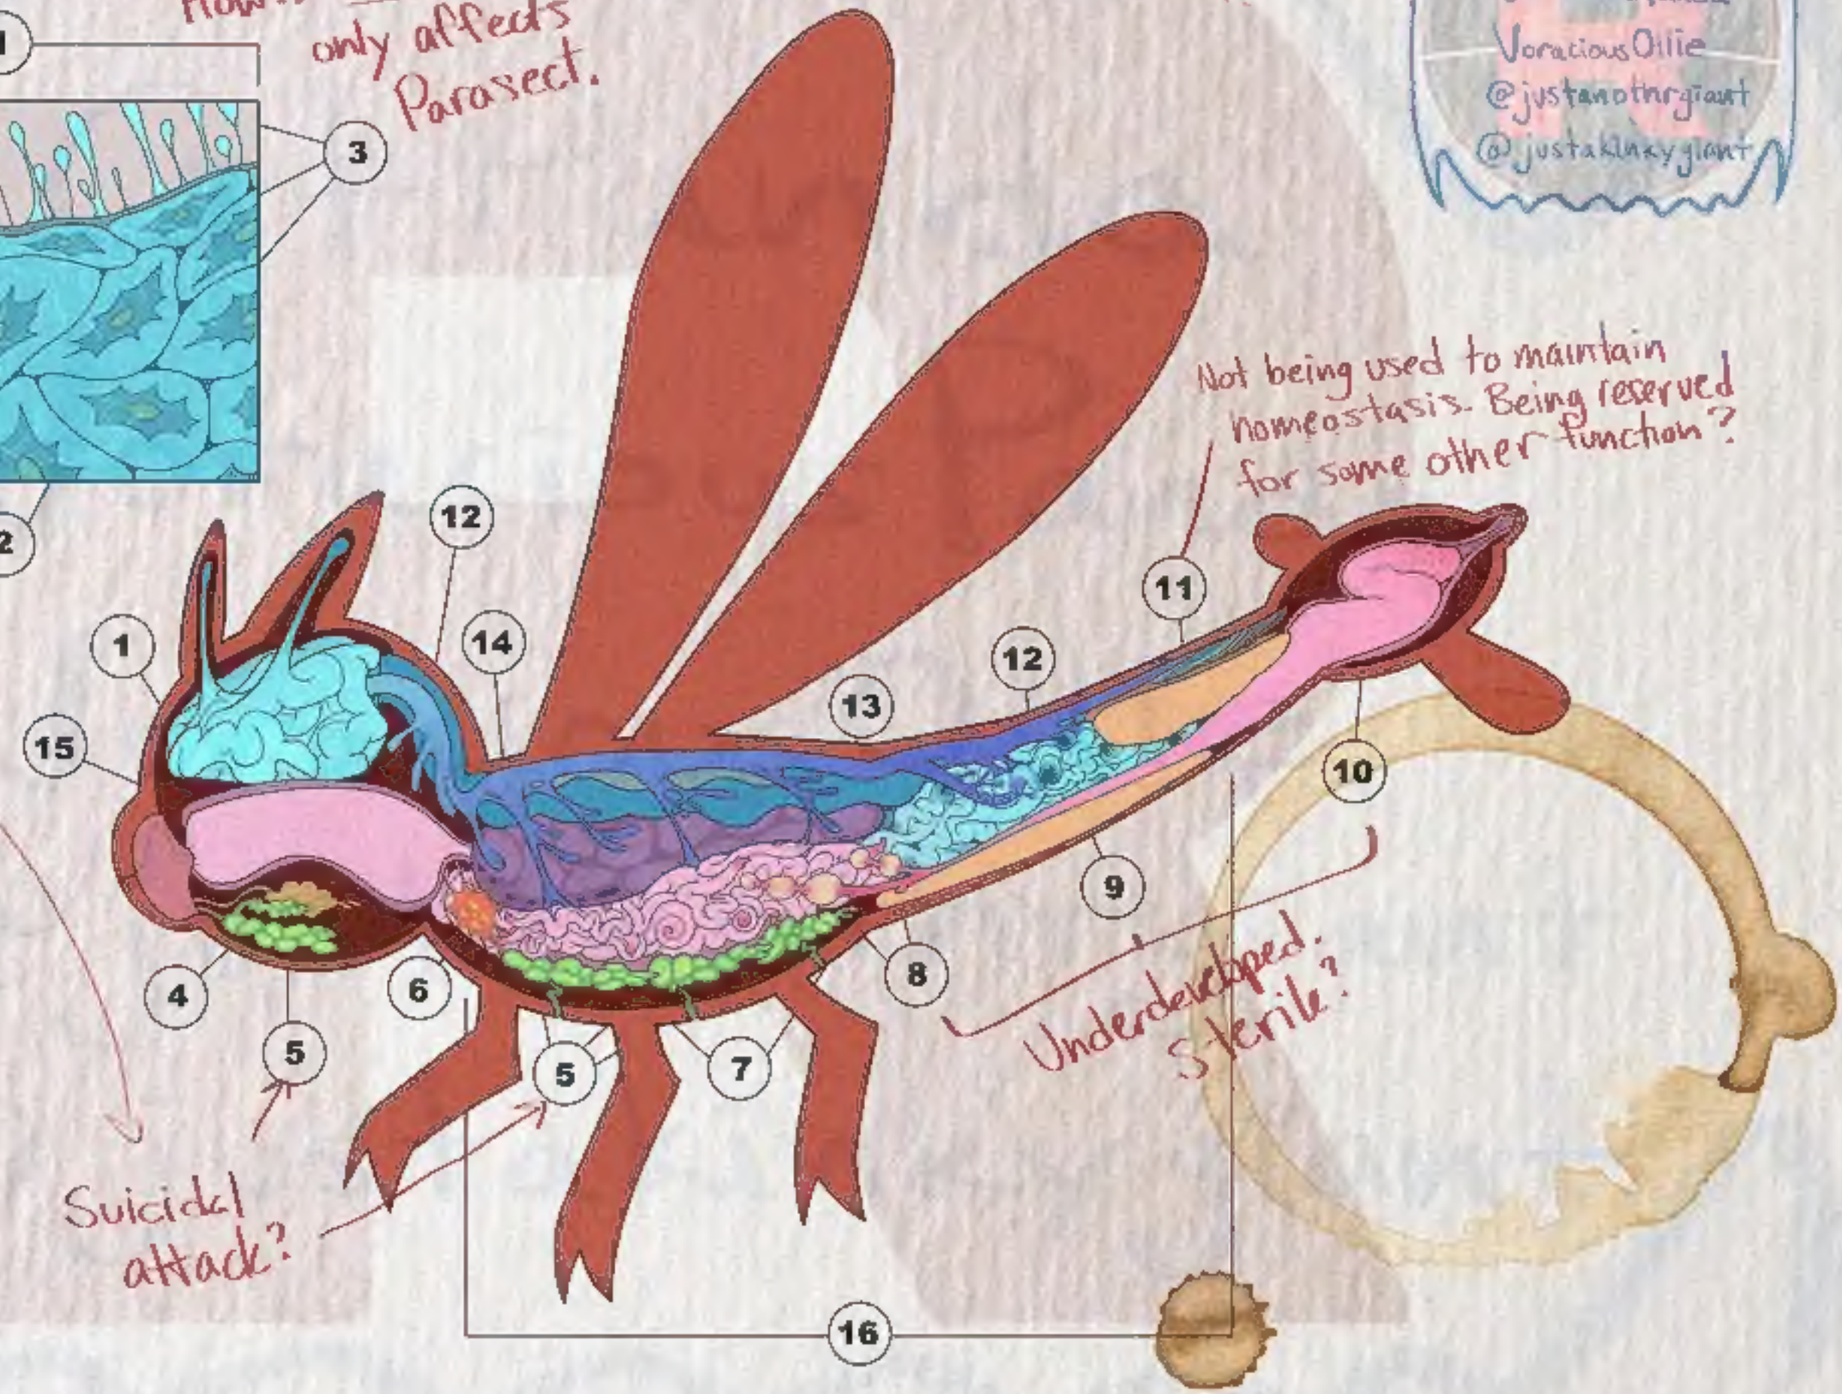
Project Failed to acheive triple typing.

How?! Tochukaso only affects Parasect.

Can only survive about a day or two outside a pokeball.

GiPanda
VoraciousPanda
VoraciousOllie
@justanothrgiant
@justakinkygiant





Not being used to maintain homeostasis. Being reserved for some other function?

Underdeveloped. Sterile?

Suicidal attack?

INDEX

1. brain
2. brain cells
3. Tochukaso mycelium
4. salivary glands
5. high-pressure acid glands
6. evolutionary gland
7. unknown prehensile muscle mass
8. ovaries
9. oviduct
10. ovipositor
11. abnormal fat pad
12. nervous system
13. heart
14. lungs
15. foregut
16. missing mid and hindgut

Our serendipitous accident has acheived Project Element's original goal.

Project Element Hybrid: Subject Y-1.

Type Bug/Flying/Fighting. Host sex female. Parasite sex female.

Hypothesis: Third typing based on host's personality.

INDEX

1. host brain*
2. parasite brain*
3. host heart
4. secondary heart
5. host lungs
6. tertiary lung
7. mutated mammary glands
8. reinforced connective tissue
9. liver
10. evolutionary gland
11. kidney
12. enlarged adrenal glands
13. bladder
14. stomach
15. small intestine
16. colon
17. host reproductive organs*
18. parasite reproductive organs*
19. oviduct
20. ovum receptacle
21. diaphanous wings
22. semi-independent tentacles
23. prehensile tail
24. ovipositor
25. accessory glands

The host has access to Pokémon elemental powers! The weaponization of this mutation is now a prime focus of our research.

*see p.2 for reproductive and neural details

Project Element Hybrid: Subject Y-1

Nervous system and Reproductive Organs Re-creation

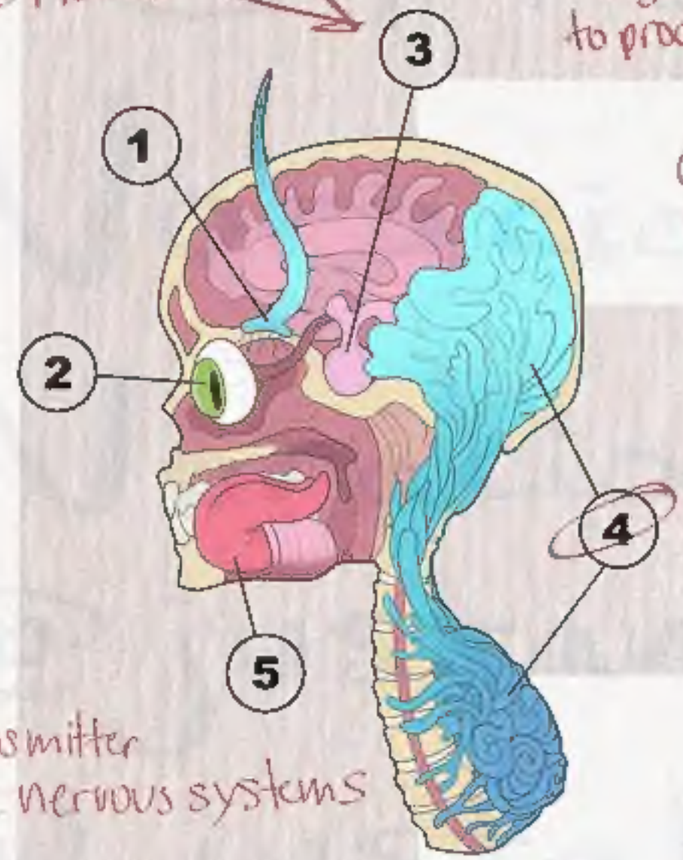
GtPanda
VoraciousPanda
VoraciousOllie
@justanaltmyjaunt
@justakinkygiant

Type Bug/Flying/Fighting. Host sex female. Parasite sex female.

Secreting modified Human Growth Hormones.

INDEX: NERVOUS SYSTEM

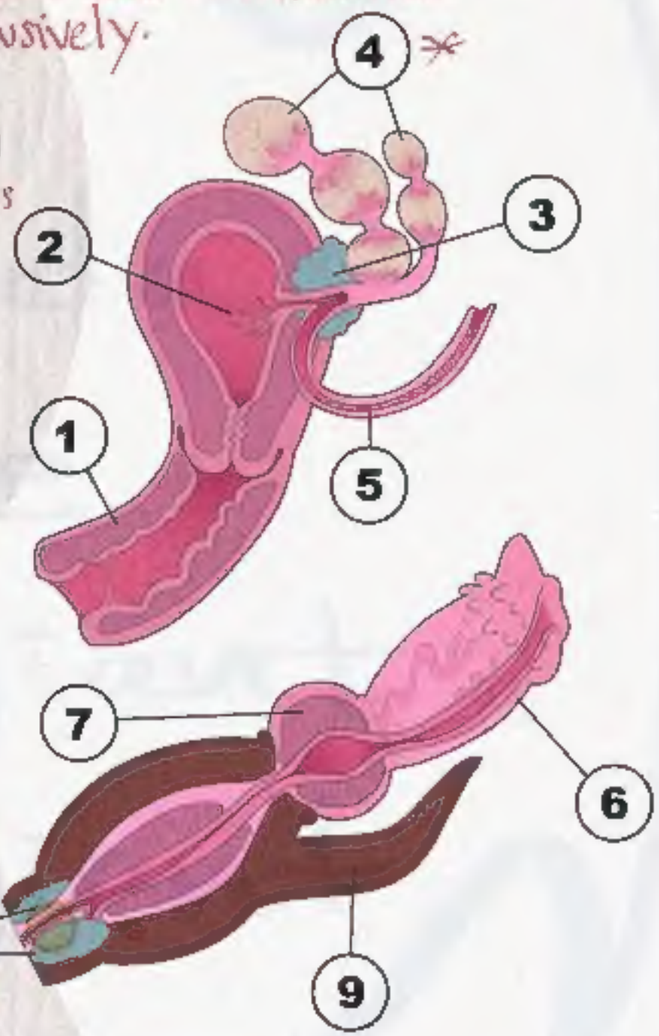
1. mutated olfactory bulb
2. UV-sensitive cone cells
3. mutated pituitary gland
4. secondary brain (with Tochukaso Mycelium)
5. prehensile tongue



Fungus acts as a neurotransmitter between host & parasite nervous systems

The genetics of the host's large gametes have been modified to produce parasitic offspring exclusively.

INDEX: REPRODUCTIVE SYSTEM

Continuous regeneration of egg cells & follicles detected.


1. reinforced vaginal muscles
2. uterine cilia
3. spermatheca
4. hybrid ovaries *
5. oviduct
6. ovipositor
7. bulbus glandis
8. accessory glands
9. claspers
